

Exploration 02 — Two-register system + TFA motif

Does the shared cream foundation + overlapping accent actually read as 'two registers of one site'? And how does the Igbo visual tradition show up in chrome without becoming wallpaper?

READ ME FIRST · 760×920

EXPLORATION 02 · PRE-DESIGN · SYSTEM TEST

Two registers, one site.

Map style and serif are settled (B watercolor + Fraunces). The next system question is whether Pachinko and TFA can share a foundation and still feel like distinct visual registers — or whether TFA needs more differentiation than the umber header alone.

- WHAT'S BEING TESTED
- Pachinko hub** — cream ground throughout, teal as primary accent, burnt orange as eyebrow voice. Watercolor map with the Busan→Osaka→Tokyo migration arc.
 - TFA hub** — umber header band at top, cream ground below, terracotta primary, forest green secondary. Same structural skeleton, different visual register.
 - Side-by-side** — both hubs compressed together. The honest test: do they feel like two registers of one site, or two sites?

HOW I'M HANDLING THE IGBO VISUAL TRADITION

Uli line work and Akwete geometry are specific traditions, not "African pattern." To avoid pastiche I'm building a small vocabulary of primitives — single-stroke curves, geometric repeat units, a chevron band — and using them as *chrome*(rule ornaments, dividers, card corners), never as wallpaper. The motif card lets you react to each piece in isolation before seeing it deployed.

Hubs are mocked at low-medium fidelity · Real images are placeholders · Spoke-page interior layout is not in scope here

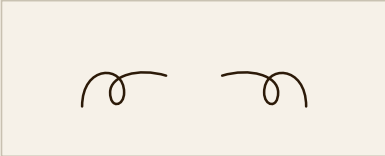

Restrained primitives sampled from uli line work and Akwete geometry. These are the building blocks; deployment is in the hub mocks below.

PRIMITIVES, LABELED · 1120x720

ULI STROKE · SINGLE CURVE

Section opener accent. Section-end terminus.

ULI STROKE · PAIRED TENDRIL

Pull-quote bracket. Hub-card corner accent.

ULI DOT CLUSTER

Spacer between sections. List-item bullet at large sizes.

AKWETE BAND · CHEVRON

Section divider rule. Page-header bottom edge. Used at small heights only.

AKWETE BAND · DIAMOND

Hub-page header band only. Single occurrence per page.

TRIANGLE TERMINATOR

End-of-section marker. End of an article.

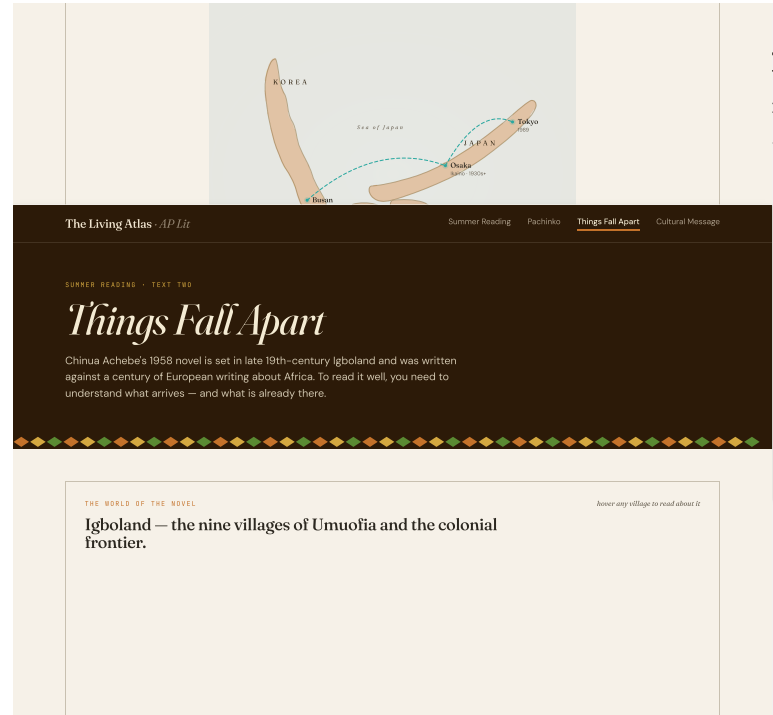

PACHINKO

Pachinko hub — cream throughout

Cream ground, teal accents, watercolor map (Exp01 direction B). Ornamental but not fusty.

What you should be checking: Same type voice (Fraunces). Same skeleton (eyebrow → headline → map → pull quote → five cards). Same grid and rhythm. The differences are tonal: Pachinko stays on cream and breathes; TFA opens with the umber band, lands harder, then exhales onto the same cream below. If you read this as “two registers of one site,” the system works.
